# Jonathan Harmon

Implementation Specialist with Tempus Technologies. Freelance
Web Developer using JavaScript, React.js, Node.js to create and
develop responsive, user-friendly, and visually appealing projects.
Greater Indianapolis

## Summary

I apply my expertise in Business, Web Development, and creative
thinking to create successful applications and websites that address
real-world issues for real people. I focus on designing solutions that
meet the ideal balance of user needs, project goals, and technical
feasibility.

I'm proficient in a range of programming languages, including
HTML5, JavaScript, Node.js, React.js and Angular.js. All these
languages have projects dedicated to showing that they have
responsive, user-friendly, and visually appealing websites using
modern web development frameworks and tools. Frameworks that
I am experienced in include Express, JEST, and React testing
library. For the data storage on these projects, I use MongoDB and
Mongoose.

I excel at collaborating with cross-functional teams and in
environments where I can make a meaningful difference.

Additionally, I continuously seek out opportunities for growth and
learning as a Web Developer outside of work to continue creating
solutions that positively impact others.

---
